

Pressure Plate Locating Dowels

Install the dowels in the holes marked "A" for Nissan and JWT QR25 Clutches. These are the 3 unthreaded holes closest to the center of the flywheel.

(This flywheel also has an additional clutch bolt pattern for other types of clutches see JWT for more info)

Flywheel Mounting Washers

Install washers on new (recommended) factory flywheel to crank bolts. Torque bolts to 80 ft/lbs and then loosen.
Retighten using RED LOCTITE to 83 ft/lbs. (Flywheels bolts may back off if Red Loctite is not used!)
Torque clutch cover bolts to 24 ft/lbs in an even diagonal pattern.

BEFORE INSTALLING CLUTCH, CLEAN ALL SURFACES TO INSURE SMOOTH CLUTCH OPERATION.
